

THE MOSQUITO PIPE

Anthony Allen Jabr

Ph:(618) 684-6375

I CLAIM

1. A torch apparatus for burning citronella oil (or other insect repelling oils) comprising:

a horizontal fuel canister portion constructed of a length of pipe; and

the said length of pipe is approximately one and a half inches in diameter and approximately four feet in length; and

the top portion of said length of pipe has been drilled to accommodate wicks; and

said wicks being spaced approximately six inches apart in a single row along the entire upper length of said segment of pipe; and

the ends of said length of pipe extend vertically upper approximately one inch at a ninety degree angle to the horizontal length of pipe; and

said ends each have a removable cap, threaded or otherwise, to allow the introduction of the citronella fuel into the horizontal section of the pipe and when capped prevents contamination of said fuel; and

the said horizontal length of pipe, wicks, and vertically up turned ends are supported off the ground by means of two adjustable stands positioned approximately one foot from each end; and

said stands allow for the leveling of the horizontal section of the pipe when placed upon uneven ground; and

when said torch apparatus contains citronella oil and the wicks are lit, then the fumes merge together to create a continuous wall of fumes extending several feet upwards thereby creating a more effective barrier of citronella fumes for deterring mosquitos.
